

ECO Safe Charge™

Power Management System

Designed to safely charge multiple devices simultaneously.

LocknCharge makes life easier.

The remote controlled ECO Safe Charge™ Power Management System has the capabilities to charge multiple devices safely and efficiently.

ECO-TIMER-CYCLE mode individually powers each group of outlets at a time for the duration selected. It then automatically turns power off before applying power to the next group of outlets. This continues until it has cycled through all groups of outlets. This reduces the possibility of a general electrical overload if many high power demanding laptops are connected.

ECO-TIMER-ALL mode sequentially stages power to each group of outlets but automatically turns the power off after a selected time has elapsed.

SAFE-ON mode sequentially stages power to each group of outlets. What does this mean? It reduces the possibility of a momentary electrical overload when multiple laptops are first powered on.

SAFE-OFF mode turns off all outlets.
