

# Mount Horeb Area High School Modernizes Facility with Secure Public Charging On Demand

Mount Horeb, WI, USA

## Background

The Mount Horeb Area School District serves 2,500 students in grades PK through 12. They were undergoing construction of a brand new addition to their high school when they came across LocknCharge. Committed to making the new space “state-of-the-art everything”, the district’s Director of Technology found the new FUYL Tower 15 very appealing. After comparing options and exploring all the features, it was a clear choice. The FUYL Tower was quality product, well worth the investment.

## Challenge

Students needed a way to securely charge their devices in public areas of the school so that devices were not lost, stolen or broken while charging. Outlets can be hard to come by and do not provide protection against breakage or theft.

## Solution

The FUYL Tower solution offers the best pathway to modernizing facilities across the entire district. Innovative, on-demand, centralized and secure charging towers offer total convenience without expensive infrastructure updates. The new addition is the perfect place to start infusing thoughtful 21st century design and amenities.

## Results

Wall outlet use is minimized, keeping devices safe and sound while charging.

Students are in control. Students use the centralized Towers to store and charge their devices behind a door that is locked using their personal RFID badge.

Mount Horeb is able to establish itself as an innovative district from all aspects. Their investments will help to increase enrollment, which will benefit the school long term.

**A FUYL Tower in “Public Mode” is available for anyone who needs fast and secure charging on demand. Examples include students who need a device charge during the day, environments where devices are prohibited, or for students facing housing insecurity.**
